## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, with respect to the rejection(s) of claim(s) 1 and 3-21 under Johnson have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found prior art.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, 4, and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Lemelson (6058323). Lemelson disclose a medical imaging system and method comprising a patient support surface, an imaging apparatus with a chamber to receive a portion of a patient to be imaged with a support table, which is adjustable relative to the support surface (abstract, col. 7 lines 5-15, col. 10 lines). The system also includes sensors to indicate orientation of the patient (col. 10 lines 12-30 lines 37-40).

4. Claims 5-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Matzuk (3964296). Matzuk disclose an ultrasound scanner assembly comprising a base, a drum rotating on the base for receiving a portion of a patient (col. 4 lines 19-30 lines 61-68, col. 5 lines 8-22), a transducer head rotating with the drum and displaced relative to

Art Unit: 3737

the drum along an axis parallel to the axis of rotation, said head including a plurality of transducers each operable to propagate a wave along an axis of propagation to receive signals from respective focal zones spaced relative to one another along said axis of propagation (col. 4 lines 54-60, col. 5 lines 33-35). The scanner assembly includes overlapping focal zones and data from each signal in overlapping portions of the focal zones is compared to conform the signals to a common base (col. 26 lines 32-43). The system including adjusting means to assist with specific positioning of the scanner with respect to the specimen (col. 8 lines 50-58).
